### Staying Water Safe on Holiday

**What hazards should I be aware of at the beach?**

**Waves**  
A strong wave could knock you off your feet even in shallow water. Always be careful as waves can drag you out to sea.

**Tides**  
Tides can come in very quickly trapping the unwary away from safety. When visiting the beach stay alert and learn the times of the tides.

**Rip currents**  
Rip currents are strong flowing areas of water that move out to sea from the shoreline, they can quickly drag swimmers out to sea.

If you get caught in a rip current you must

- Stay calm and try to stand up if possible
- Shout for help
- Wave your arm above your head so you can be seen
- Swim parallel to shore until you are out of the rip.

The diagram shows a swimmer being carried out to sea by a rip current. Labels include: Rip channel, Direction of current, Beach, Rip Head, Incoming waves, and Swim Parallel to shore. A swimmer is shown being carried out to sea.
